Keyes Information Technology (KIT) specializes in Information Security and Information Technology Consulting and Staff Augmentation.

Philosophy and Mission

KIT's mission is to help clients reach their maximum potential within their organizations by maximizing the efficiency and effectiveness of their IT solutions.

Services

KIT offers an array of specialized services with primary focus in:

Information Security Consulting and Services

- Risk Assessment

Assess existing processes, systems and applications for security gaps.

Design a stronger security posture to mitigate risks. Conduct Risk Awareness training sessions.

- Governance

Assess, design and implement a governance framework that enforces information security through a set of inherent controls without sacrificing efficiency.

- Security Strategy and Architecture

Define information security strategy and architecture to design and build secure applications in the cloud and on premise.

Data Analytics

- Deployment/Installation Services of Commercial Off-The-Shelf products such as Splunk with follow-on customer training and support
- Solutions that help manage business performance metrics through dashboards and visualizations with user drill down capabilities
- Highly available managed data analytics solutions

IT Staff Augmentation

- IT expert-on-demand services
- Customer facing issue management services
- Remote IT department capabilities
